

# MATLAB Idiosyncrasies

Thursday, September 10, 2020 7:56 PM

- MATLAB supports bare words in some circumstances (not sure which ones)
- ``who`` lists all the variables in scope. ``clear x`` deletes the variable `x`. ``clear`` deletes all variables.
- ``disp(x)`` prints `x`
- ``help sin`` displays inline docs for `sin`, ``doc sin`` opens a browser to more extensive docs
- ``pi``, ``i``, and ``j`` can all be reassigned, but the value of ``1i`` is always  $\sqrt{-1}$
- Comments start with ``%``
